AMS
Food Production Software

- Optimisation of your FOOD production
- Full traceability from raw material to finished product
- Flexible operator solution
- Established industry solution of over 35 years
- Measurements and quality control
- Full support for handling lot and batch numbers

FEATURES:

Operator Solution

Production Plan

Receipt of Goods

Recipes

Material Consumption

Traceability

Waste

Deviation Registration

Measurements

Machinery and Equipment

Our direct FOOD software for safe and secure food production gives you control over your processes and effectively ensures labelling and quality control.

In the food industry, there are high demands for raw material handling, traceability, and reporting. **direct FOOD** is an industry software that covers these requirements and provides full traceability and labelling.

direct FOOD has an operator solution for paperless production for individual workstations. The system ensures efficient and safe reporting with access to all critical production data. Barcode readers can also be connected quickly to register raw materials used in production.

direct FOOD has full traceability from raw material to finished product, as well as handling orders, production lines and workstations, recipes, articles, measurements, and deviations.

OPERATOR SOLUTION

Integrated seamless data flow for orders, raw materials, and recipes

TRACKING

Maintain routines and processes that ensure traceability

MEASUREMENTS

Gain complete control with reporting of measurements
